

CBlobResult::GetNumber

```
graph LR; A[CBlobResult::GetNumber] --> B[CBlobResult::GetNumBlobs]; A --> C[CBlobResult::RaiseError];
```

The diagram illustrates a control flow where the `CBlobResult::GetNumber` function calls two other functions. The `CBlobResult::GetNumber` node is on the left, shaded gray, and has two outgoing blue arrows. The top arrow points to the `CBlobResult::GetNumBlobs` node, and the bottom arrow points to the `CBlobResult::RaiseError` node. Both target nodes are white with black borders.
